SeaPort Enhanced
GSA Contract: GS-35F-0380M
DUN: 04551-8805
CAGE: 1JY5

We are a web software development and integration company. We specialize in sophisticated intranet and extranet solutions focusing on two main areas: geospatial analysis and information management.

Zekiah Technologies, Inc. has exceeded client expectations since incorporating in 1999. We maintain a compact, technically-gifted staff which adapts quickly, serves clients with enthusiasm, and attacks the details with precision. The end result? Versatile, on-time, on-budget solutions.

We don't just dabble in web-based solutions, we are masters of them. Our process is based on three principles:

1: Function

It all starts with planning, ensuring that the end result not only works well, but meets your *exact* needs. This means more than mastering the technologies we use, but also understanding the engineering and business processes our clients use.

2: Innovation

We create our own products and methodologies through vigorous testing, prototyping and development. As a result, our clients receive technically robust solutions not available elsewhere.

3: Versatility

A versatile solution is the foundation of long-term efficiency and economy. Our development approach is to deconstruct the client's business processes, then rebuild them so that common functionalities and methods are identified and inefficiencies are eliminated. This flexible approach allows the client to leverage our solution in several ways, saving time and money.

What we can do for you

Our specialty is the development of systems that merge digital mapping and information management. These systems allow users to access critical information from a central location within a secure, web-based environment.

The particulars include:

- ◆◆◆ Infrastructure Assessment and Management Systems
- ◆◆◆ Remote Tracking and Sensing Integration
- ◆◆◆ Scalable Application Architecture Design
- ◆◆◆ Data Gathering
- ◆◆◆ Geospatial Modeling and Methodology Integration
- ◆◆◆ Common Operational Picture Development

What we've done for others

When our clients say “mission-critical,” it's not just an expression—it's real life. Our well-earned track record as a dedicated, trusted contractor for federal agencies and the U.S. military reflects our success in those critical missions. It's a reputation we intend to keep.

We have successfully completed 100% of all task orders received since 1999. And every contract we've completed that had *potential* for additional work has *resulted* in additional work.

What's it all mean? Zekiah gets it done, the right way, over and over again.
